

## *Finally, a simple & effective* **KEY EXCHANGE BOX**

Insert and turn your issued key in one end to release the trapped key from the other end.

- One key always trapped
- Mounts anywhere
- Uses any brand of industry standard rim cylinders

**Perfect for securing building master keys or “loaner keys” at the location they will be needed rather than issuing keys to all people who might need access.**

Common Uses:

- Building master keys to be shared by a roaming maintenance or security staff.
- Loaner keys to contractors or part time employees
- Any situation where you are trying to limit the number of secured keys to a minimum yet make necessary access available to those who may need it – at all times knowing who borrowed the key and insuring that key gets replaced.

Everything you need except the actual rim cylinders you want to use.

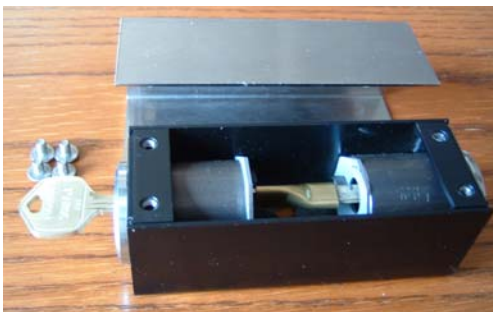

Concealed mounting holes allow for installation to any desired surface/location.

Combination of Spacer/Collar and backplate allow for adaptation to virtually any rim cylinder.

Tailpiece connecting sleeve connects the rim cylinders together such that only one key at a time can be extracted.

Once cylinders are in place and the box is mounted where desired, simply attach the stainless steel cover with the stainless steel screws. *(Note: Screws are shipped as Phillips style for universal application – drilling heads after installation or replacement with security screws is recommended.)*

**Single Orders: 1-9 Units = \$79.99 ea.**  
**10-up = \$69.99 ea.**

*InstaKey Licensed Dealers & GSA purchasers call for applicable discounts.*
